

March 18, 2010

Dear Dr. Robertson,

With a population under 10,000 residents, Harrisburg appears to be the type of type whose residents travel long distances for innovative and thorough care. With a new and exciting addition, that has changed. Integrated Health of Southern Illinois is proud to include a Class IV Laser in our arsenal of therapies. By combining the newest technology with a highly skilled and attentive staff, our clinic has become a destination for patients from both neighboring and distant communities.

Integrated Health opened its doors in August of 2009. This new clinic offered not only Chiropractic care, but also had full Occupational and Physical Therapy departments and a Massage department. This new, "full circle" approach to health care allowed any patient in any department to be referred in-house and immediately consulted. In November of 2009, a LiteCure Class IV Laser was added to our list of serviced. In a 10 minute session, the patient experiences a deep, soothing warmth on the treatment area while the laser is actually stimulating cellular activity. State of the art technology allows this powerful laser to be a pain free healing therapy that is the perfect complement to our practice. Both pleasant and effective, no one can argue this machine is an answer to many patients' needs.

On any given day we see everything from a pinched nerve in our chiropractic rooms to a rotator cuff surgery recovery in our therapy rooms, and the LiteCure Laser treats them all, We have had success with a long list of conditions and injuries including, but not limited to: Back pain, myofascial trigger points, Carpal Tunnel Syndrome, knee pain, neuropathic [pain, arthritic pain, tennis elbow, sprains, plantar faciitis, and surgery recovery.

Some of our regular patients have found everything they need in the LiteCure Laser to get them back in the game. Always active in our community, the staff here not only follows our local sports teams, but loves to help them. The benefit goes beyond simply healing pain. With the LiteCure Class IV Laser at our fingertips we can help a patient get back to doing what he or she loves with less pain, in less time, with more enjoyment than ever before.

The Laser therapy is used in every aspect of our clinic now. A great majority of our Occupational and Physical Therapy patients have a Laser session with every therapy session to speed their progress along. Our Chiropractic patients are often introduced to the laser to ease an adjustment or help a hot joint. Many massage patients have a laser treatment on a sore muscle right before a massage to allow the therapist to more thoroughly treat them. Every facet of our practice has benefited from the LiteCure Laser.

Our staff and patients alike are greatly appreciative of the opportunities available to us with your laser. Not only has the equipment brought about amazing results, but your attentiveness and dedication has been helpful beyond words. The LiteCure Laser has by far paid for itself in the few short months we've had it.

Sincerest thanks,

Integrated Health of Southern Illinois

live.
